Git Assignment 2: Branch Creation and Switching. Create a new branch named 'feature' and switch to it. Make changes in the 'feature' branch and commit them.

Create a new branch named 'feature':

git branch feature

Switch to the 'feature' branch:

git checkout feature

Make changes in the 'feature' branch:

Adding some new features in the feature branch.

Add the changes to the staging area:

git add example.txt

Commit the changes:

git commit -m "Added new content in the feature branch"

created a new branch named 'feature', switched to it, made changes, and committed those changes.

Create and switch to the new branch

git checkout -b feature

Edit the example.txt file to add new content

Stage the changes

git add example.txt

Commit the changes

git commit -m "Added new content in the feature branch"
